

Name: **Ashmita Ganguly**

Reg. No.: **25BAI10010**

Branch: **CSE AIML**

Year: **First year**

Course Code: **CSE0001**

Date: **29th March, 2026**

Introduction:

Digital literacy is the ability to use digital devices, the internet, and online platforms in a safe, responsible, and effective way. It is very important for students because most education, communication, and job opportunities are connected to digital technology. It helps to use computers, search information online, communicate through emails, create digital content, and stay safe from cyber threats. Digital literacy also helps students to build professional online platforms like GitHub and LinkedIn. Learning digital literacy skills can improve knowledge, communication, and career opportunities. Overall, digital literacy is an essential skill that helps individuals to succeed in the modern digital world.

Task 1 – Infographic

I have created an infographic on digital literacy using Canva. The infographic included topics such as the meaning of digital literacy, safe internet practices, useful digital tools, and professional online presence. I tried to present it in a simple and visually attractive way so that people can easily understand it.

I have learned how to design templates, icons, colors, and text styles to present information clearly. I have also learned to summarize large information into short and meaningful points because an infographic should be simple and easy to read.

The most interesting part of this task was designing the infographic and arranging the content in a creative way. However, I found it a little difficult to choose the right design and reduce the amount of text. Overall, I have improved my creativity, digital skills, and understanding of digital literacy.

Task 2 – Digital Portfolio:

GitHub is a very useful platform to store, manage, and share coding projects. It helps me to keep my assignments, programs, and project files organized in one place. GitHub also allows me to show my work to others. It can help in the future while applying for internships or jobs, as companies can see my technical projects and coding skills.

LinkedIn can help to build a professional online presence. LinkedIn is a digital resume where I can add my education, skills, certificates, and achievements. It also helps me to connect with professionals, teachers, and companies, which can help me learn about internships, job opportunities, and career guidance in the future.

Kaggle is a platform for data science and machine learning practice. It helps to work with real-world datasets, learn data analysis, and participate in competitions. This will help me improve my analytical thinking and technical skills, which can be very useful for my future career.

Task 3 – Coding

I created an account on HackerRank to solve a beginner-level programming problem. This task made me understand how coding platforms work and how problems are solved in online coding platforms. I read the problem statement carefully, write the code, run it, and check the output. It also helped me to improve my logical thinking and problem-solving skills. Practicing coding on such platforms will help me prepare for technical interviews and improve my programming knowledge in the future.

I created a digital literacy quiz using Google Forms. The quiz included five questions related to digital literacy, online safety, and digital communication. This task helped me learn how to create online forms, add different types of questions like multiple choice and short answer, and view the responses in a spreadsheet. This skill will be useful in the future for collecting data and conducting surveys.

Task 4 - Draft a Professional Email & Etiquette Guide:

Writing professional emails has taught me how to communicate properly in academic and professional environments. A good email should include a clear subject, polite greeting, proper explanation of the purpose, and a respectful closing. This has helped me to understand the importance of using formal language and proper email structure.

Creating the social media do's and don'ts checklist has helped me to understand how social media can affect our digital reputation. We should post positive and respectful content, avoid sharing personal information, and not use informal language because employers and teachers may see our profiles.

I also learned how poor digital communication can cause problems. For example, if a student sends an email without a subject or writes in rude language, the professor feels a bad impression and may not respond. This shows that proper digital communication is very important.

Task 5 – Cybercrime Case Study:

Cybercrime usually happens in the digital world when the criminals try to steal money, personal information, or access to online accounts. Cyberbullying is also a type of cybercrime where a person is harassed, threatened, or insulted using digital platforms such as social media, messaging apps, online games, or emails. Many people, especially students and elderly people, become victims of such fraud because they have no idea about these online scams and safety methods.

A common example of cyberbullying is when a student is repeatedly teased or insulted by classmates through social media messages or group chats. Sometimes, fake accounts are created to post embarrassing content about a person or to send threatening messages. The victim often feels scared, stressed, and helpless because the bullying happens online and can spread quickly to many people.

Cyberbullying can lead to serious consequences such as mental stress, anxiety, depression, low self-esteem, and poor academic performance. To prevent cyberbullying, people should not share personal information online, should keep their social media accounts private, and should block and report the bully immediately. It is also important to talk to a trusted person like a parent or teacher. Cyberbullying cases can be reported on the National Cyber Crime Portal or by calling the helpline number **1930**.
